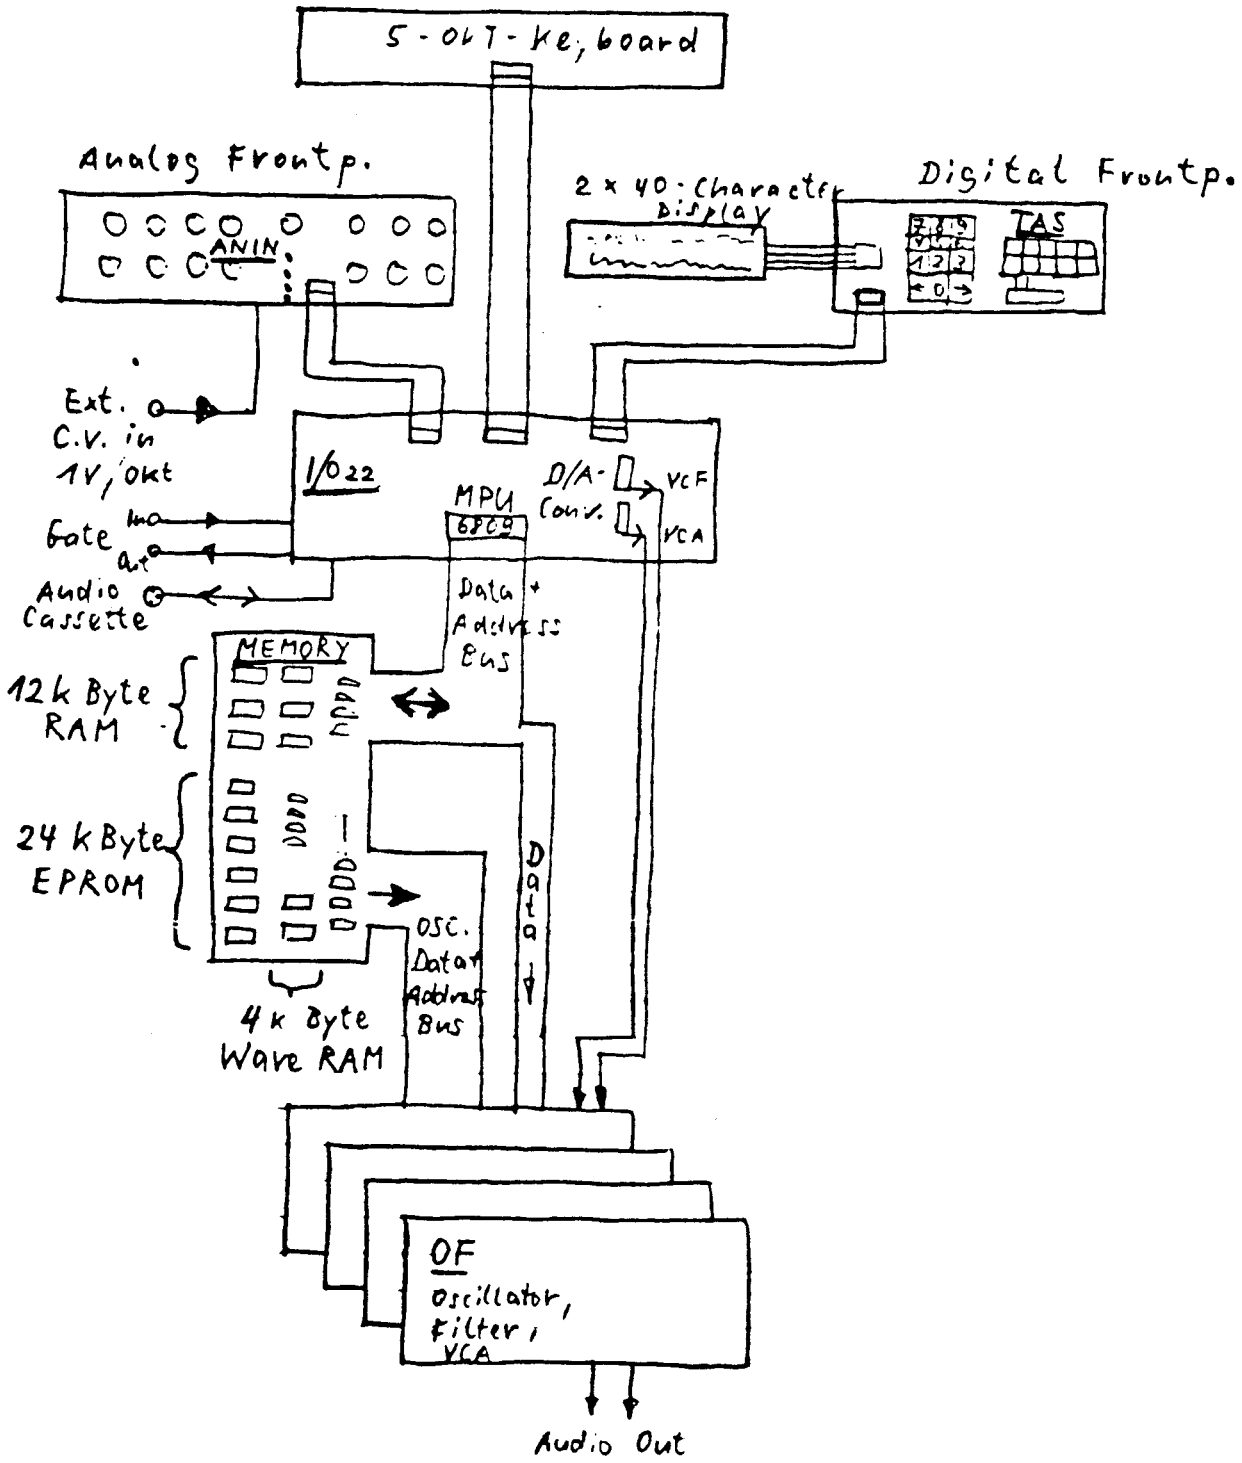
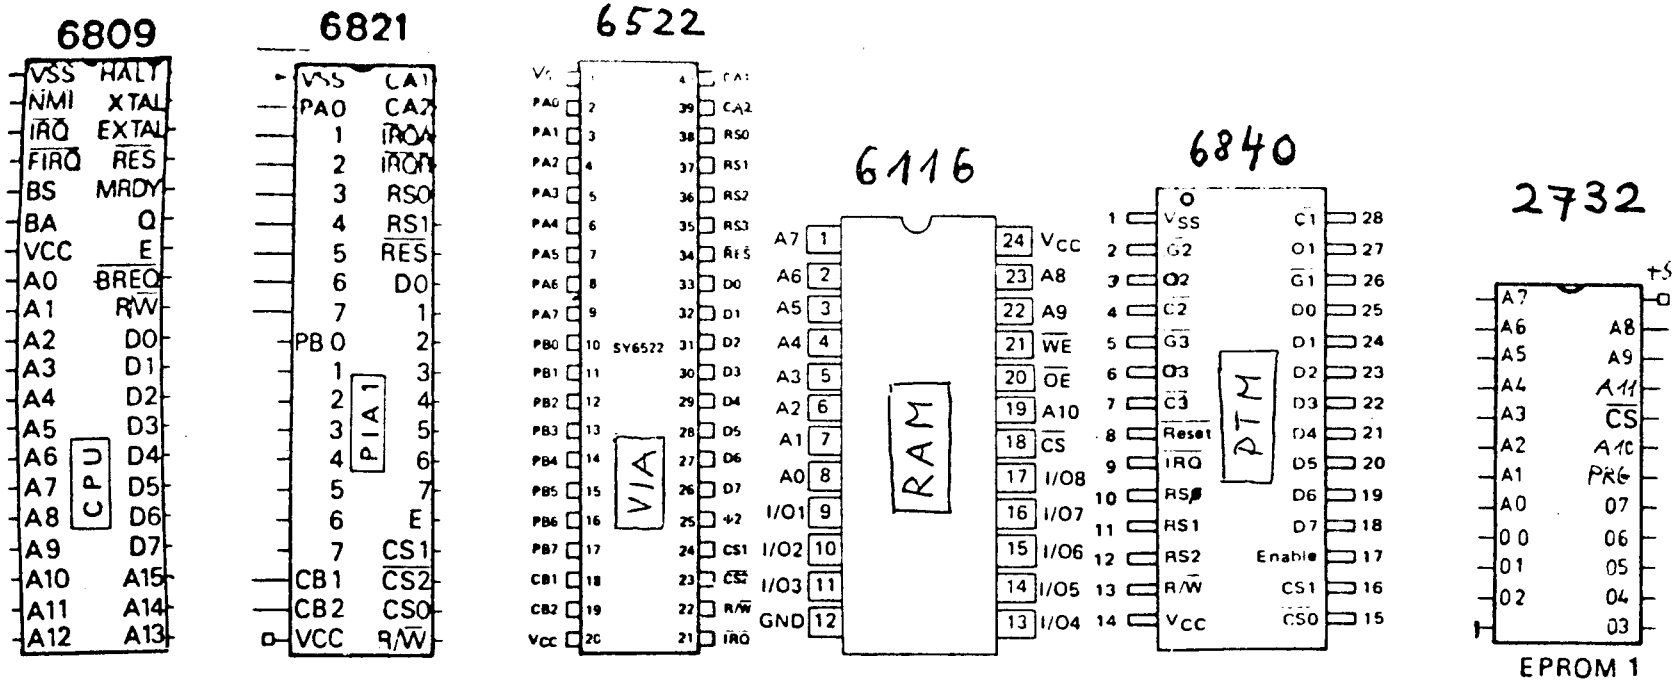
Wave 2 Block-Diagramm

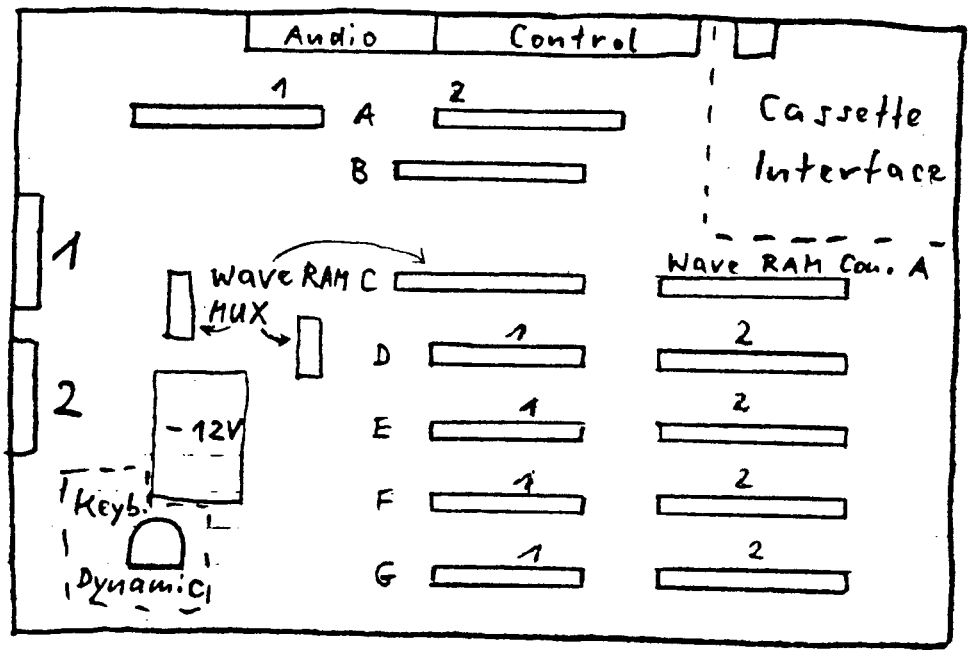


WAVE 2 Microprocessor Parts



PCB: "MB"

Wave 2



A = PCB: "I/O" contains :micro processor, peripheral IC's
D/A Converters

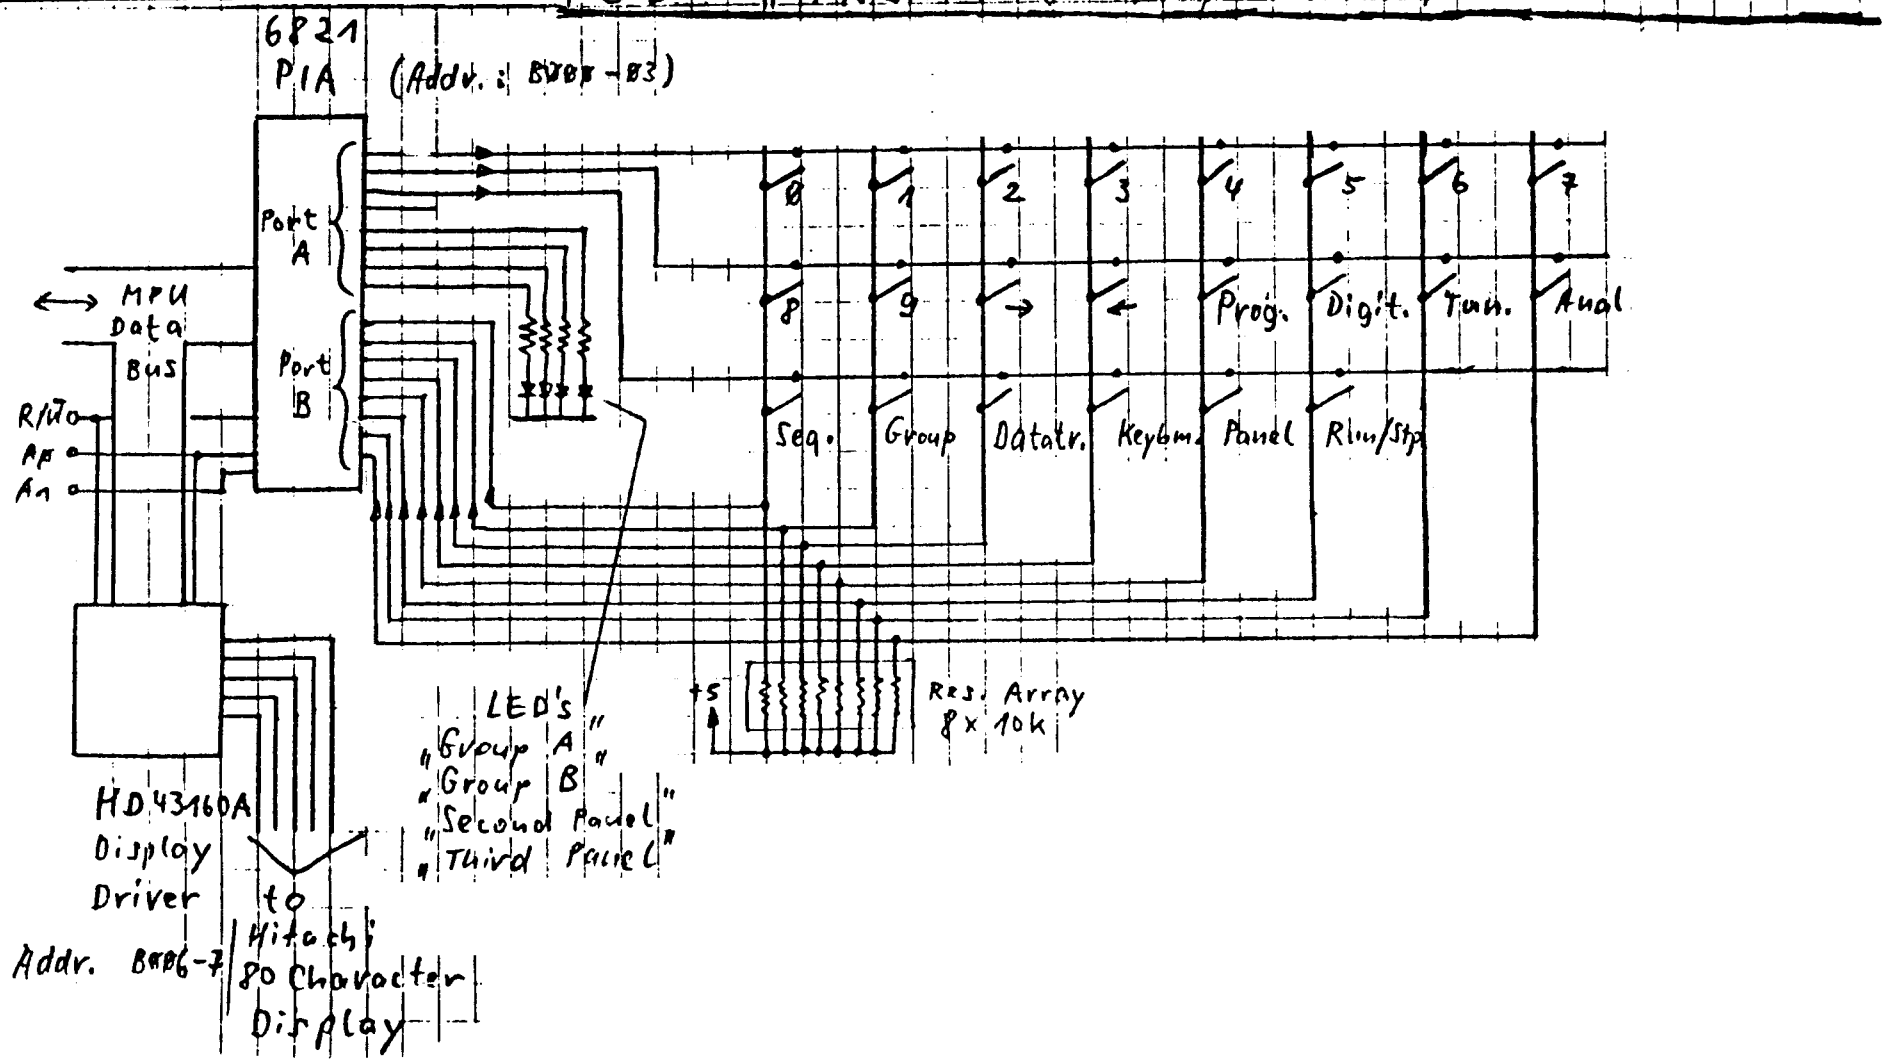
B = test-connector

C = PCB: "MEMORY" contains : ROM, KAM Sound-KAM

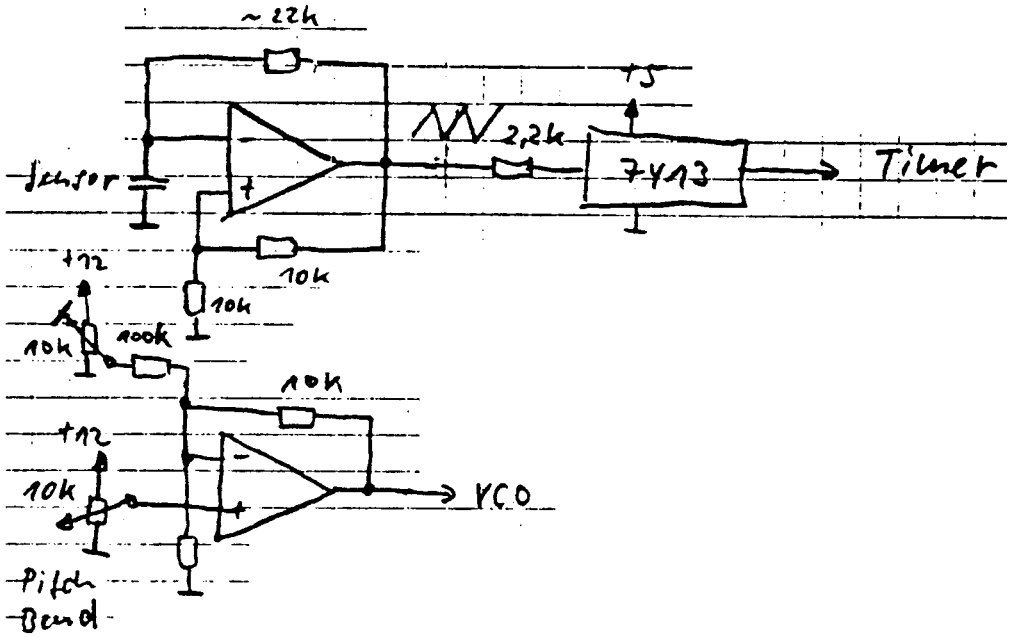
D,E,F,G = Four identical PCB's: "OF" contains: 2 VCF, 2 VCA
CV-processors

WAVE 2

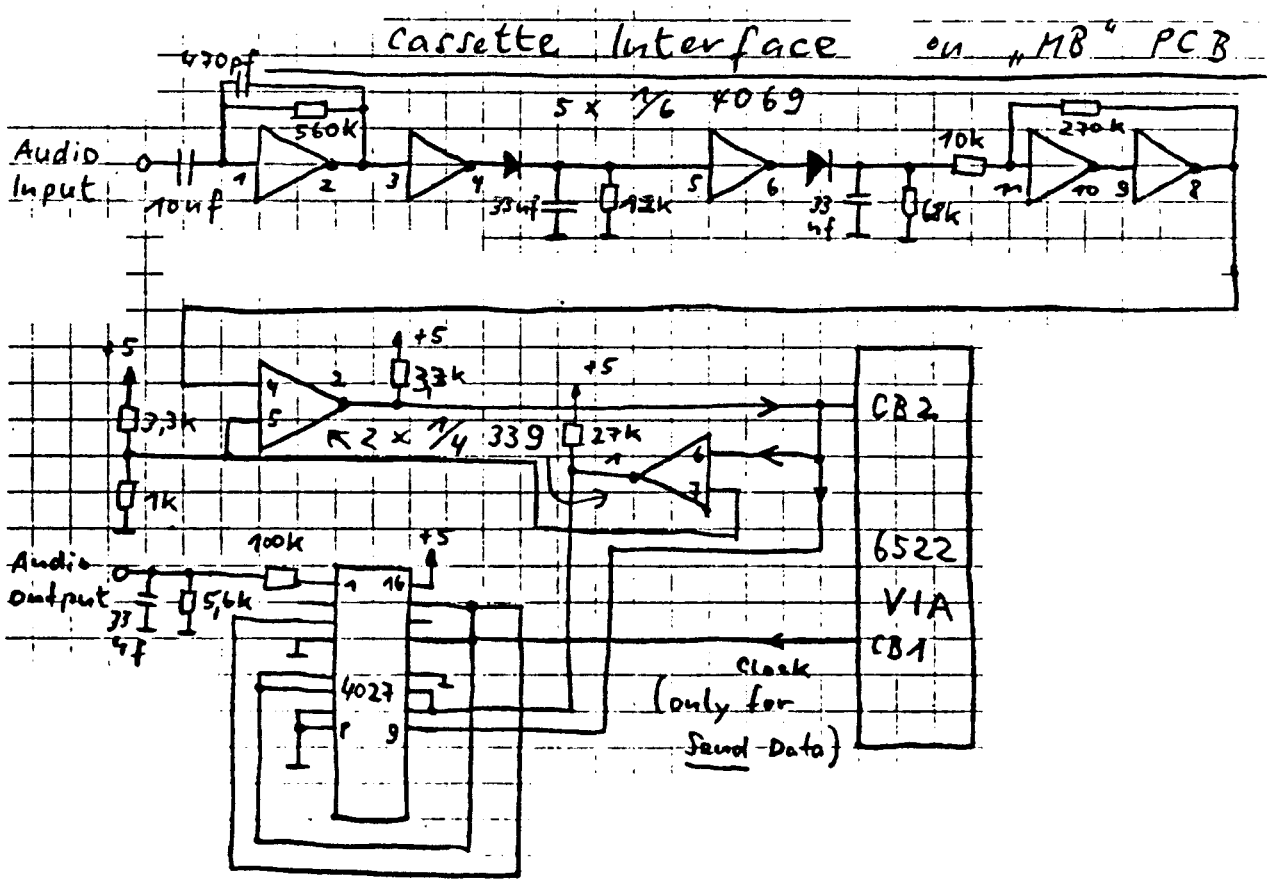
PCB : "TAS" (Display-Driver, Push-Button-Driver)

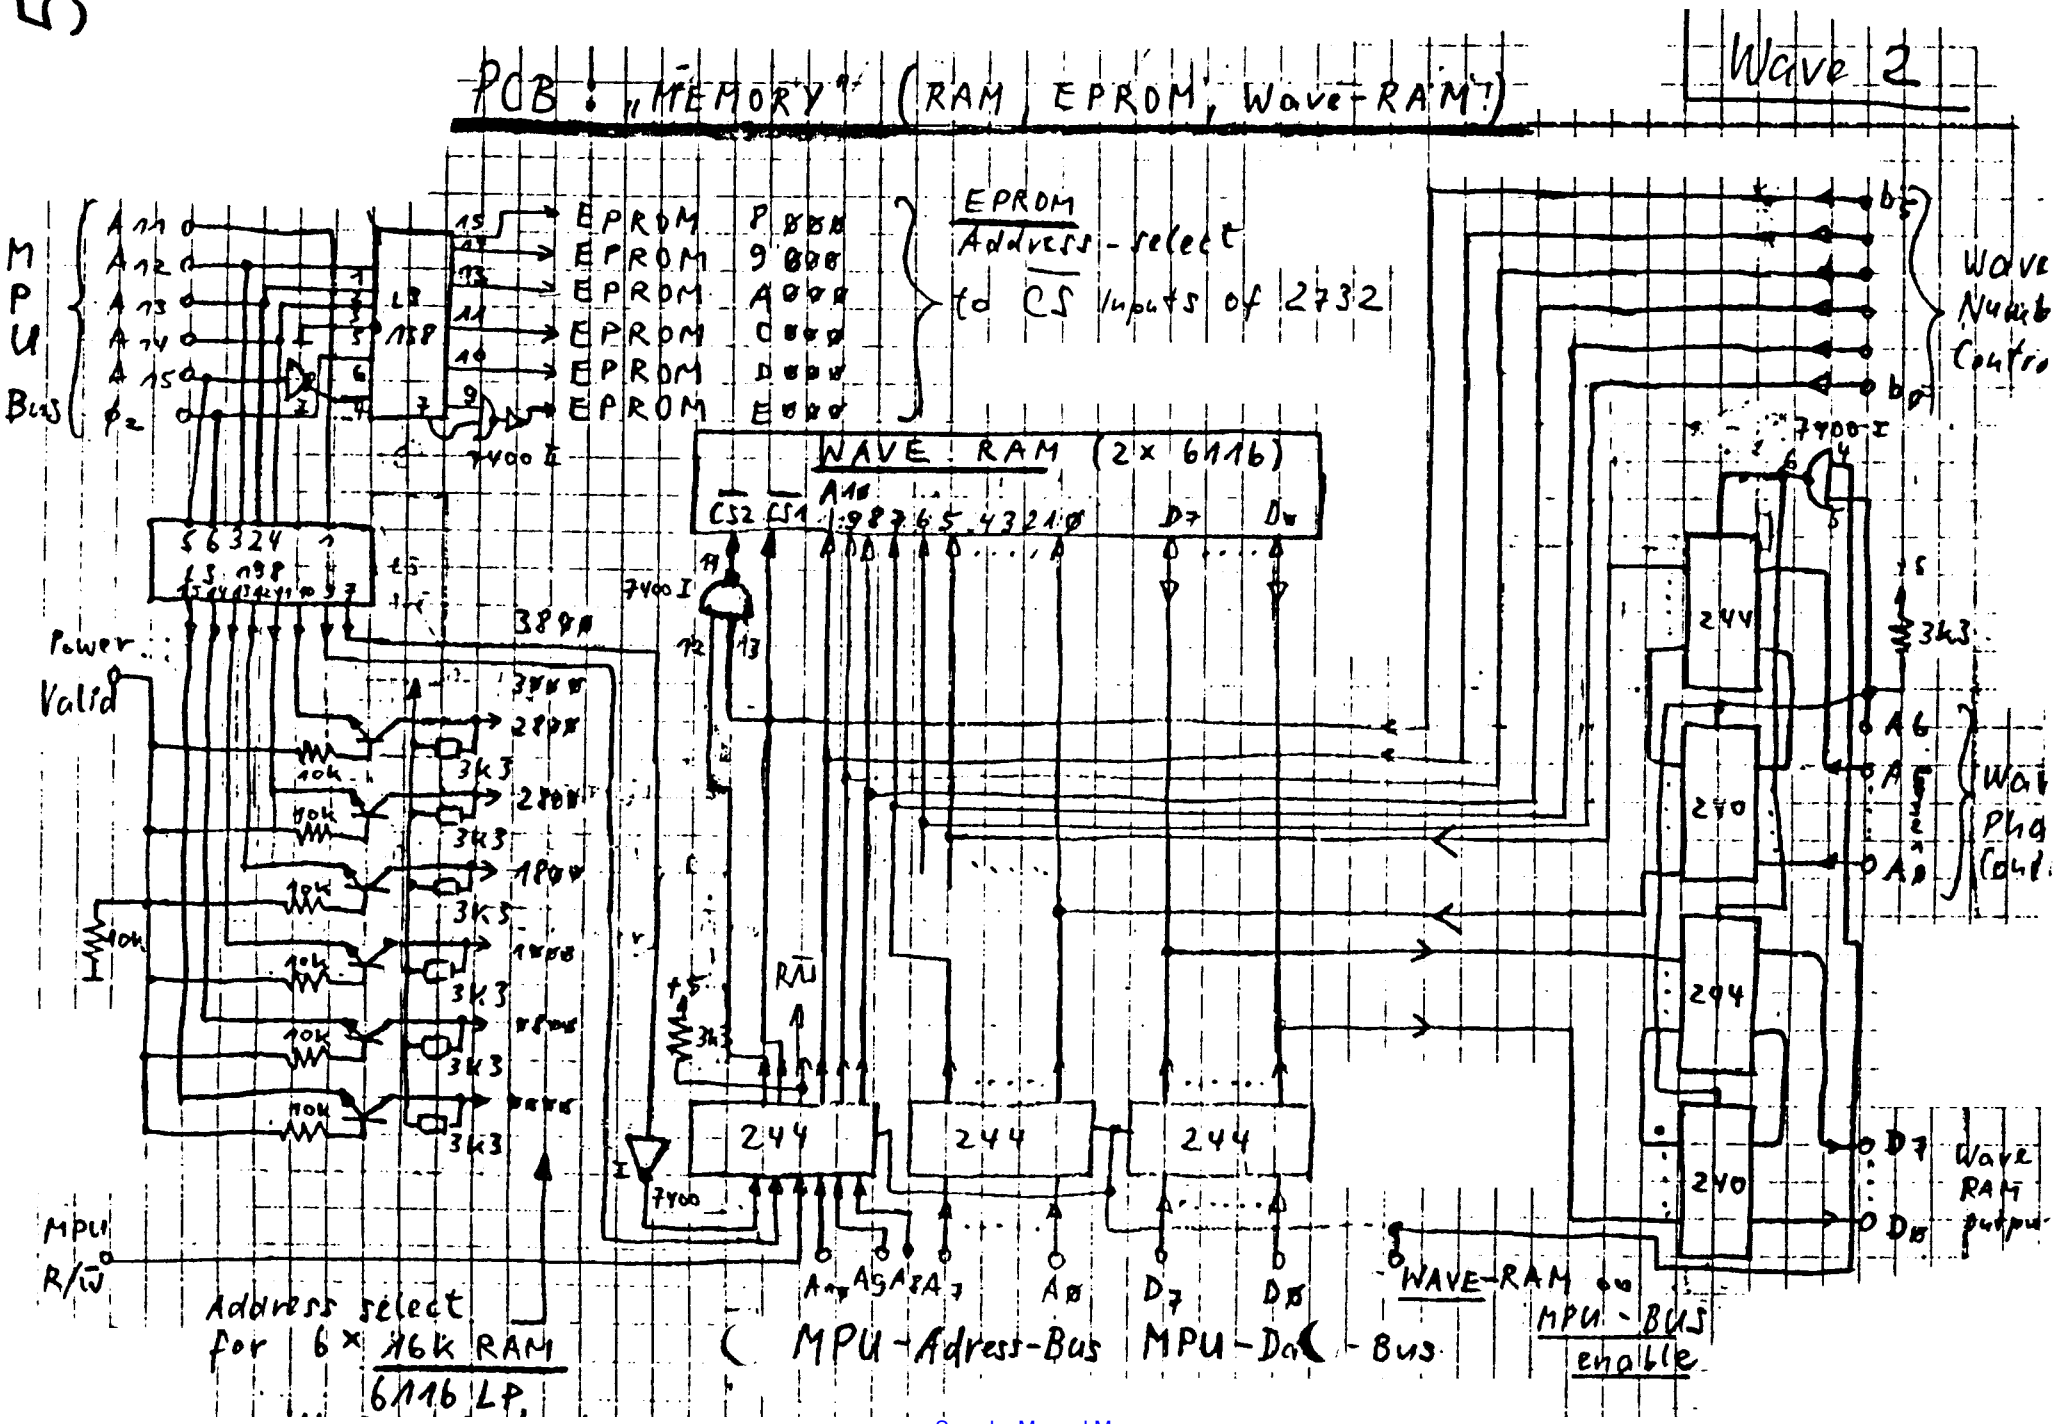


Wave 2 — Keyboard dynamik / Pitch Bend on „MB" PCB

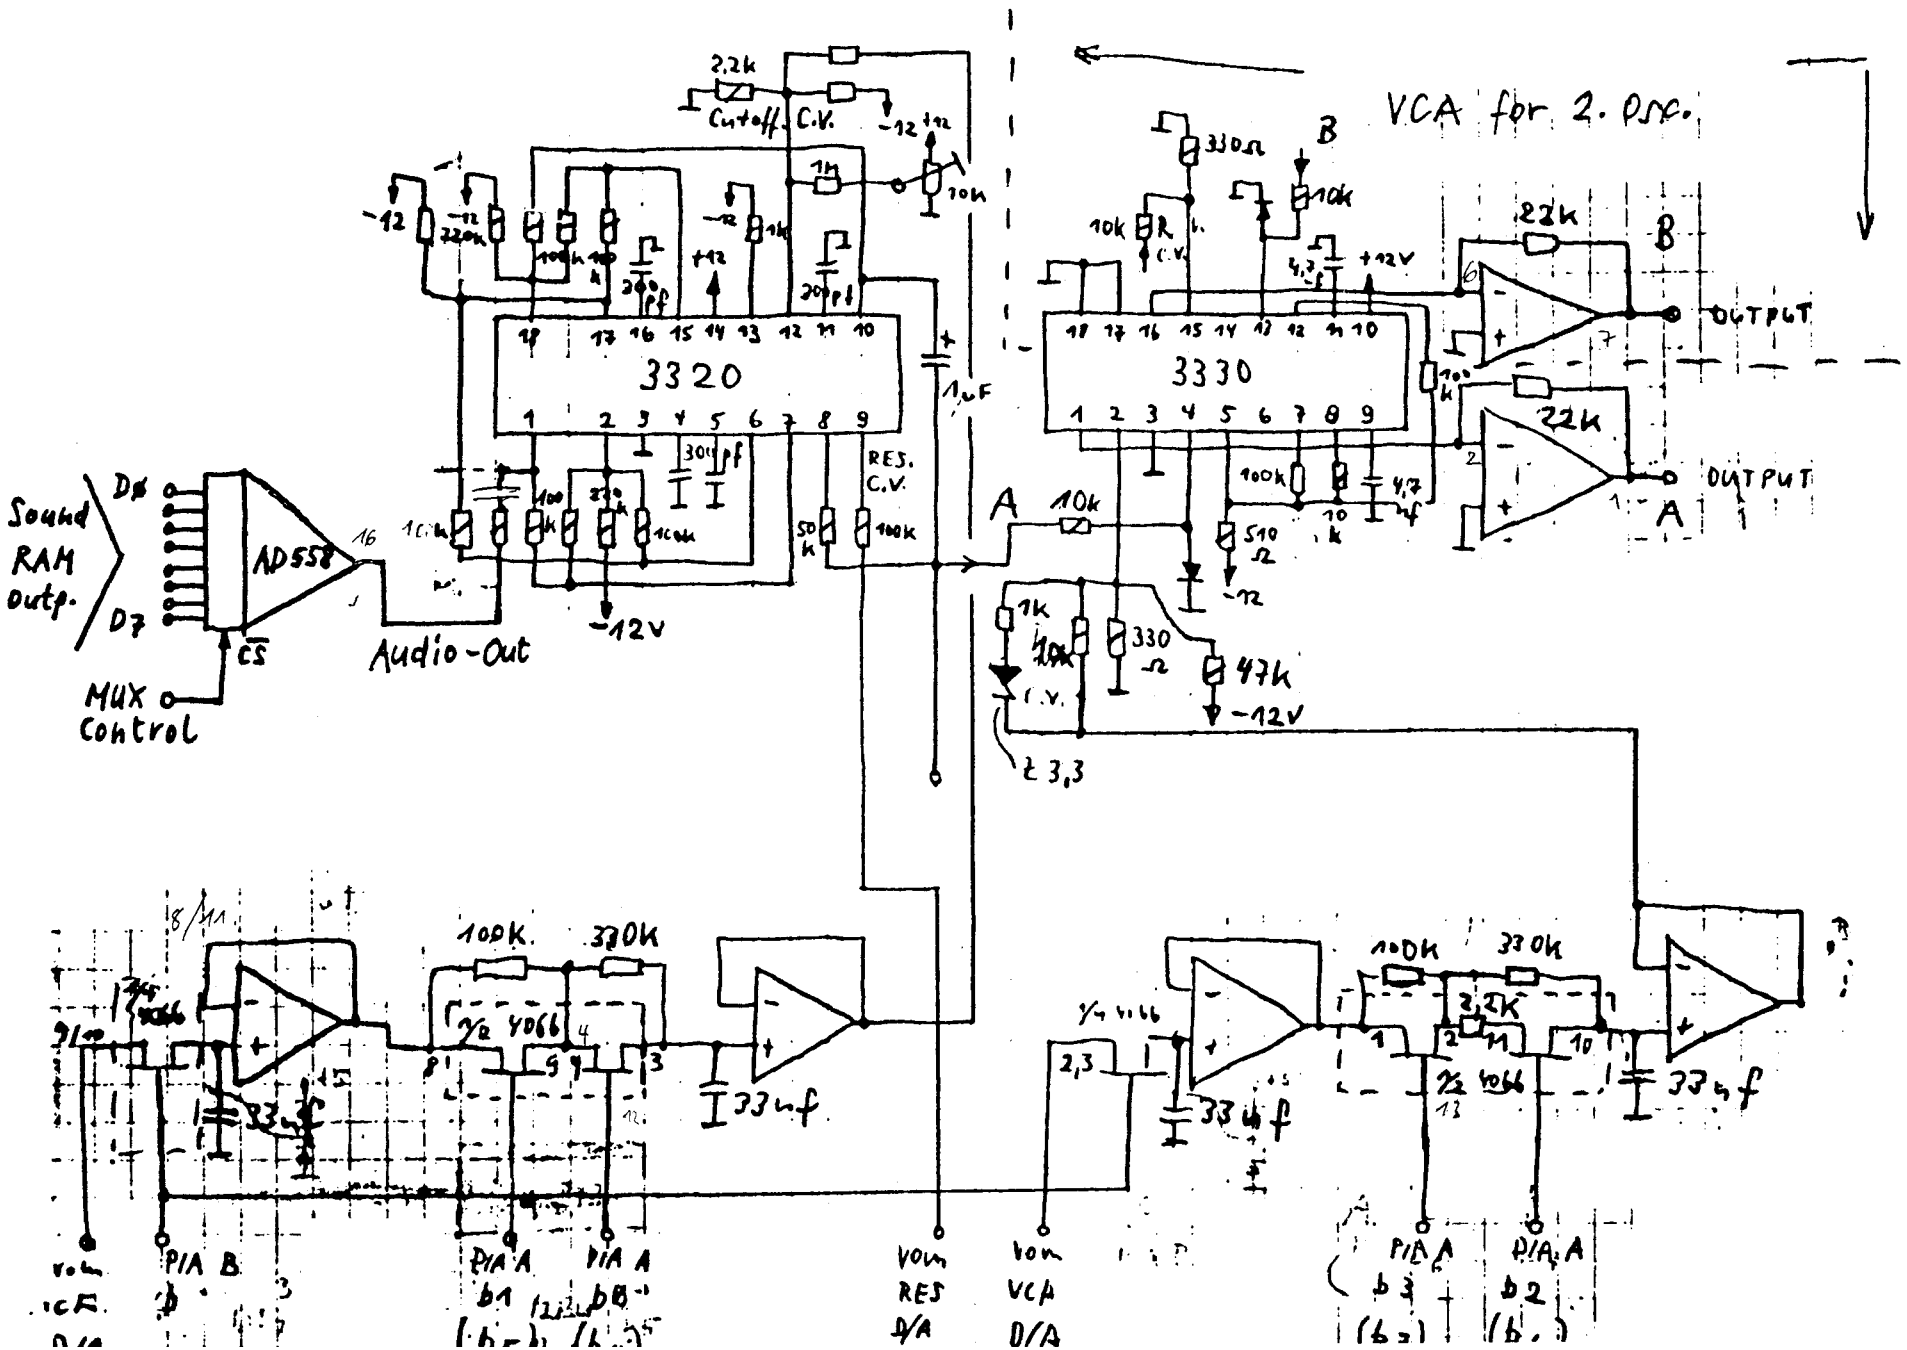


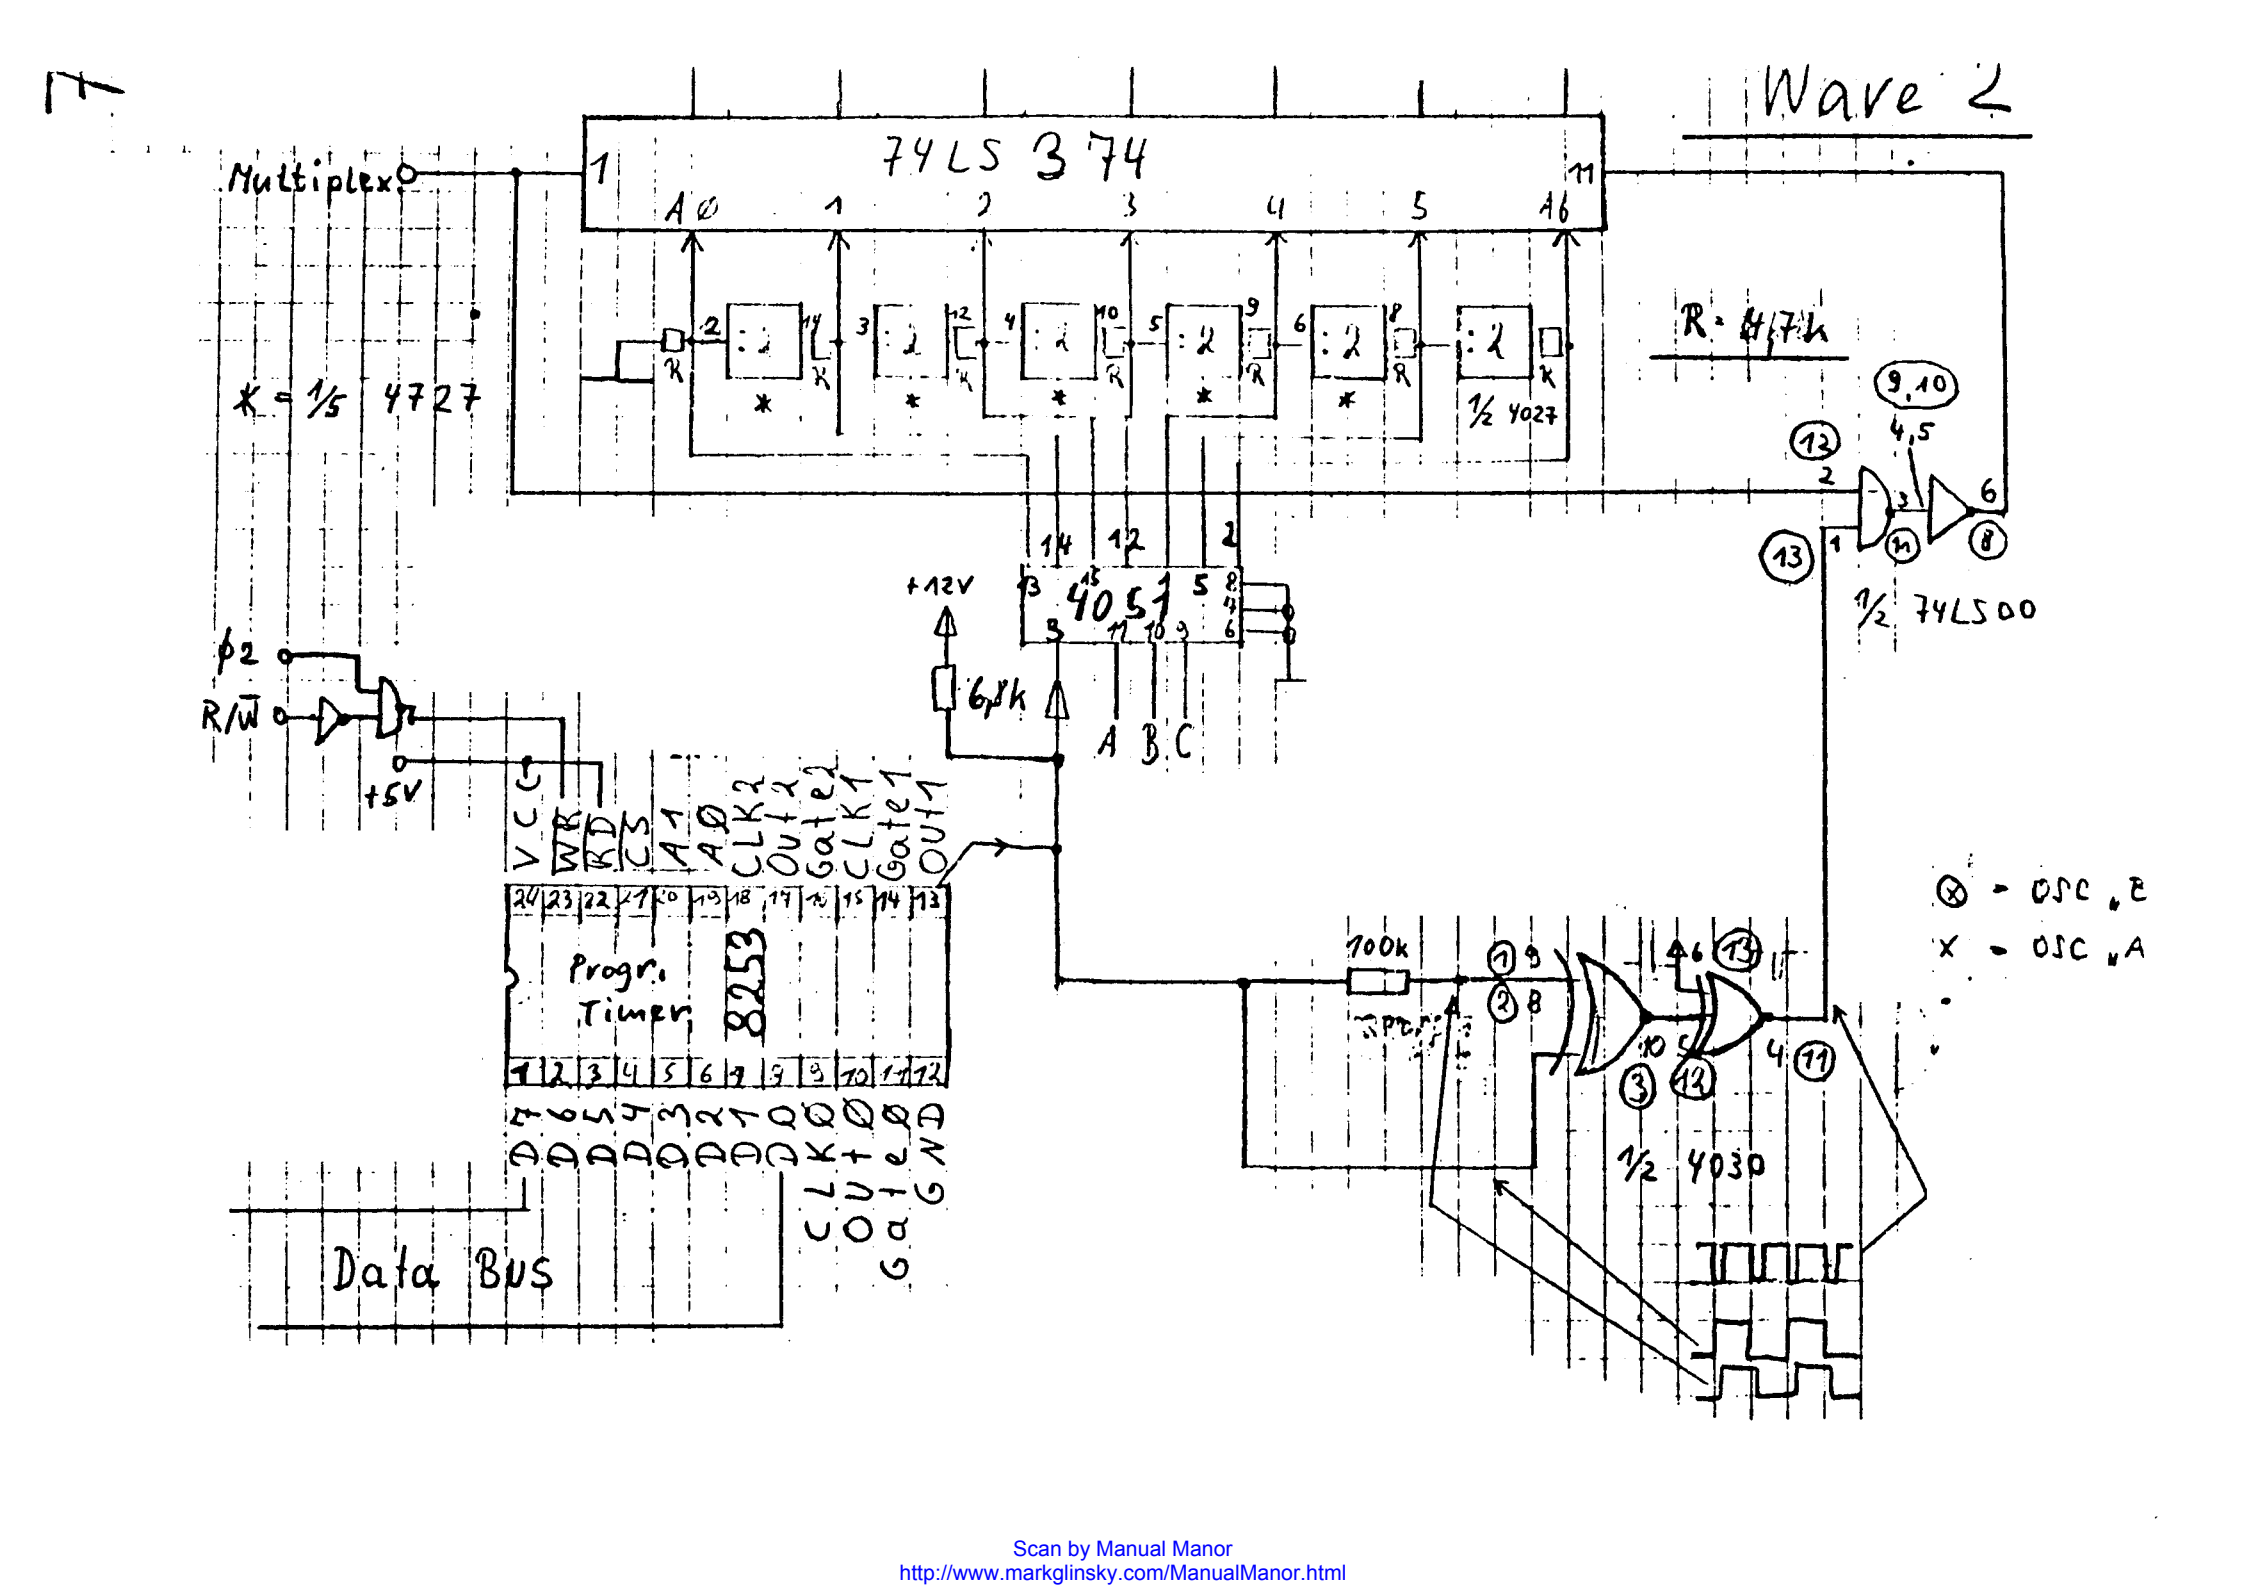
Cassette Interface on „MB" PCB





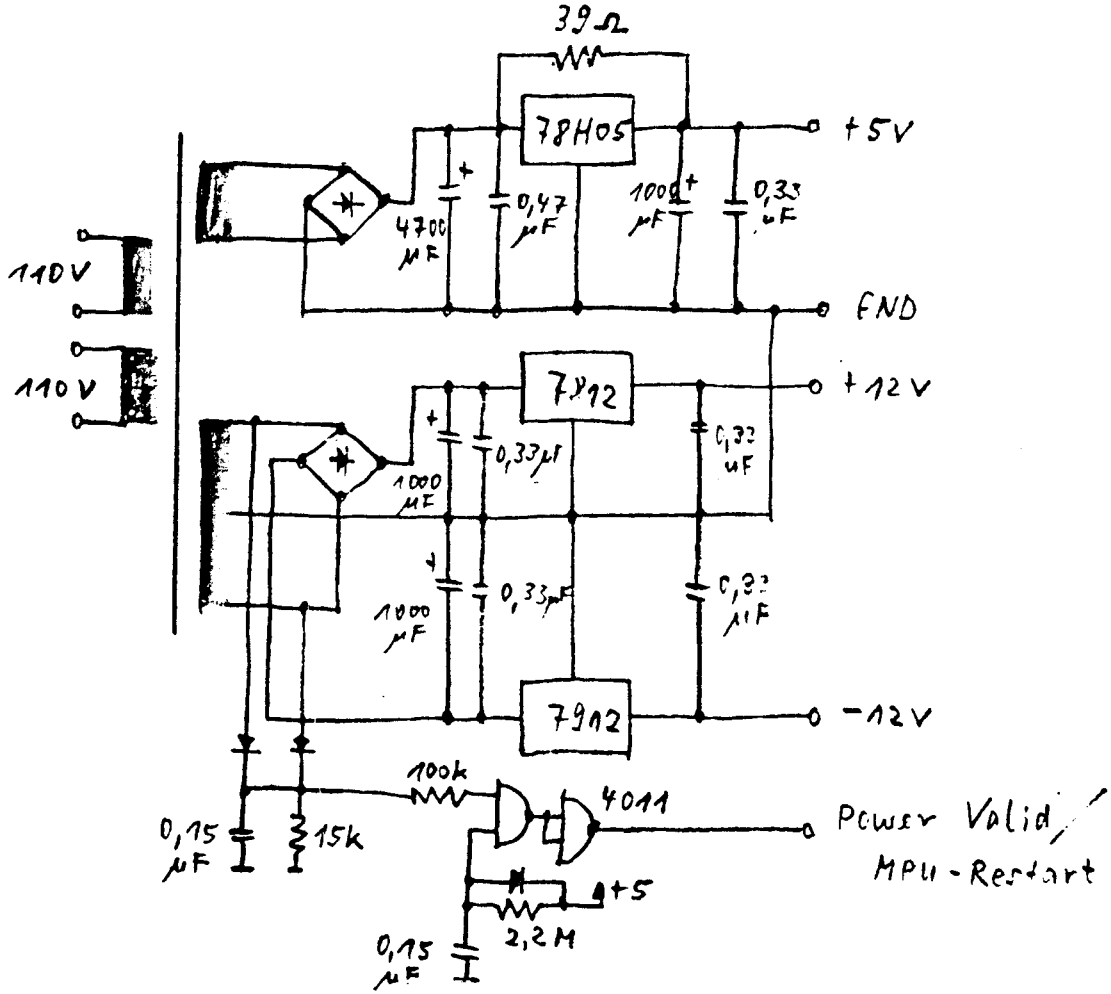
WAVE2 - Generator - Audio





Power Supply

Wave 2



"MB" Connectors :1 and 2 (9 pol. Stocko) WAVE 2

Connect.1: 1: plus 5V
2: GND
3: GND
4: AC for plus/minus 12V
5: AC for plus/minus 12V
6: N.C.
7: CH2 for Volume Poti
8: CH1 for Volume Poti
9: GND for Volume Poti

Connect.2: 1: plus 12V Pitch Bend
2: Schleifer Pitch Bend
3: GND Pitch Bend
4: N.C.
5: minus 5V Display
6: GND Display
7: plus 5V Display
8: KB-Sensor Keyboard-Dynamic
9: GND Keyboard-Dynamic

31:GND

PPG-WAVE 2 Tuning Instructions

Tuning the Oscillators

The PPG-WAVE 2 has totatly digital Soundgenerators which need no tuning. Only the top Oscillator (on the PC-Board: "I/O" which is the processor Board) can be tuned. This can be done by the trimmpot on the left side of the PC-Board. If the range of this trimmer is not big enought, the tuning can be done by adjusting the pitch-wheel. Take care that the programm you use for the tuning process has normal tuning in the tuning display (all voices = 0 in the micro tuning).

Adjusting the filters

The PPG-WAVE 2 containes eight VCF; one for each voice. The cutoff-frequency can be tuned with the trimmers on the voice-cards (PC-Board: "OF").
For the following tuning process it is required that the WAVE 2 is tuned to A=440 Hz.
Do the tuning process as follows:

1. select programm 20 of the original PPG presets don't play on the keyboard
2. set the keyboard-mode to 0
3. select the digital display by pressing the knob: "DIGITAL"
4. set the parameter "KF" to 4
5. turn the filter cutoff knob to the 0-position
6. turn the filter envelope attanuator to the 0-position
7. turn the emphasis knob to the full-position
8. press the highest "C-key" on the keyboard and adjust the filter of the first voice so, that the resonance frequency is same as the fundamental frequency of the tone. Do the adjustment with the left trimmer of the voice-card which is near the "MEMORY" PC-Board.
9. Press again the highest "C" key and adjust the filter of the second voice with the trimmer on the right side of the same board.
10. Go on with the same process trough all voices.
